

Universal Holding Frame

Proudly Manufactured
in Western Canada

Product Overview & Applications

BGE's Filter Holding Frame for built-up filter banks provides a great option to upgrade your filtration performance, and improve your indoor air quality.

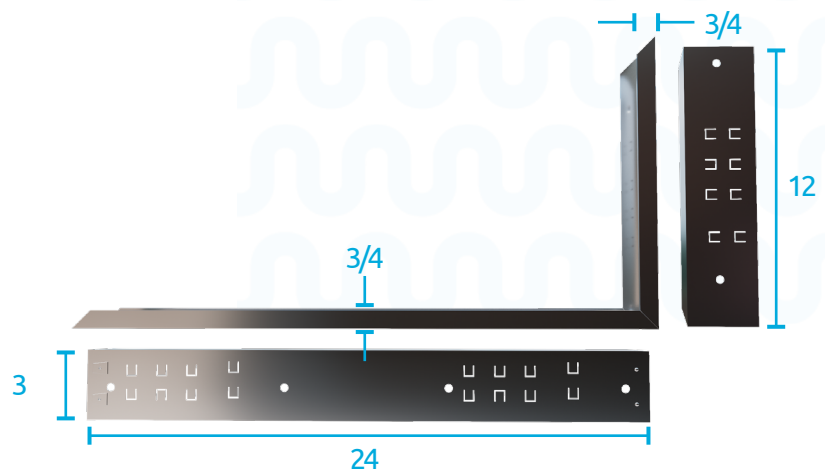

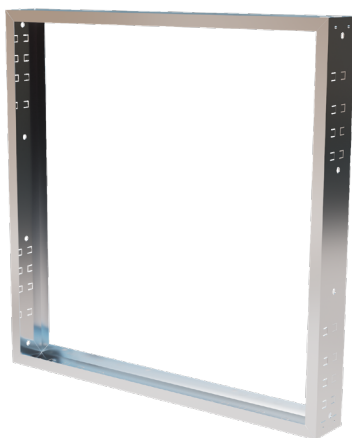

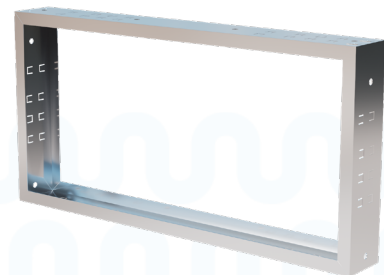

Applications

Designed for front loading upstream filter access, the positive pressure seal eliminates air by-pass resulting in the indoor air quality you expect. Latch options can accommodate single or two stage filtration systems.

Universal Holding Frame: At a Glance

- Available with gasket for single stage filtration systems
